

Memory Game Project

The memory game is about random selection. You will have a grid of cards and you will flip over two cards at a time and the aim is to match the images of the cards. If you match all of the images you win! For this project, you will use HTML, CSS, and Javascript to make this game.

Function

The game should go as such:

1. The cards will be lined up in a grid.
2. You will flip over two cards.
 - a. If they are the same image they will disappear (or whatever you choose).
 - b. If they are different images they will flip back over.
3. When all the cards are flipped over a victory message will appear. Then you can press the “new game” button.

Features

Your game should include:

- 12 cards
- Clickable features: the cards
- You can make this two-player game with a scoreboard or individual game
- New Game button
- If you used a tutorial make the HTML and CSS original

The code must include the following:

- Conditionals
- Functions
- For loop

You may use a tutorial to complete this project.
